HORIZONTAL

Power Pack's horizontal belt conveyor is a versatile and cost-effective model designed for transporting various items on a flat, continuous plane. It's suitable for both large and small industrial settings, offering easy installation, minimal maintenance, and reliable performance, making it a popular choice for commercial operations.

INTRALOX BELTS

Power Pack collaborates with Intralox, a pioneer in plastic modular belts since 1971, to offer durable and easy-to-maintain conveyor solutions. Intralox belts are ideal for industries like automotive, food, and logistics, featuring a modular design that simplifies cleaning, repair, and extends belt life. Power Pack's extensive experience ensures tailored conveyor solutions to meet specific industry needs.

WIRE MESH

The wire mesh belt conveyor is a durable and versatile option for handling products through washing, drying, heating, cooling, or spraying at extreme temperatures. It features models like flat and woven wire mesh, designed for good air circulation and fluid drainage. Ideal for industries such as food processing and pharmaceuticals, it offers easy maintenance, can transport small items effectively, and improves operational efficiency by reducing transportation time and labor.

TABLE TOP BELT

The tabletop conveyor features linked and hinged plates made from plastic, mild steel, or stainless steel, making it ideal for high-speed production environments. It efficiently transports and accumulates products, accommodates various production line layouts, and handles curves and elevation changes. Common uses include labeling, inspection, filling, and weighing, especially for small, delicate items. Its flexible design makes it suitable for diverse industries with specific processing needs.
